

# Global Infrastructure Resilience Survey

As the impacts of disasters and climate change continue to accelerate, there is a growing global need to evaluate the capacity of national infrastructure systems to absorb, respond to, and recover from such events, as well as to adapt to an evolving risk landscape. The Coalition for Disaster Resilient Infrastructure (CDRI) and the International Coalition for Sustainable Infrastructure (ICSI) invite you to participate in a groundbreaking global study. This study aims to assess the institutional and human capacities involved in infrastructure management and resilience across different nations.

# Your insights can shape the future of infrastructure resilience

The Global Infrastructure Resilience Survey examines critical sectors including water systems, transport networks, energy infrastructure, and ICT. We are seeking respondents with a thorough understanding of how institutions, policies, and governance operate in the infrastructure sector. Whether you're an engineer designing flood-resistant structures, an architect pioneering sustainable solutions, a planner developing resilient urban systems, or a government stakeholder involved in the planning and delivery of critical infrastructure, your perspective can help shape a global understanding of infrastructure resilience. Your expertise will help assess how these vital systems can better withstand disasters, adapt to changing risks, and serve communities when they need it most.

Your participation will help identify best practices in infrastructure resilience, reveal regional differences in management approaches, and guide future policy decisions. **Together, we can build a framework for infrastructure that is future-proof, inclusive and resilient.**

## Join this global initiative

This comprehensive survey will gather insights from professionals across the world. The findings will be published in the CDRI Biennial Report on Global Infrastructure Resilience, becoming a vital resource for policymakers, practitioners, and researchers worldwide. The first edition of the report can be found [here](#).

The survey will take approximately 10 minutes to complete and all responses will be anonymous. The link to the survey will be shared in March 2025.

### **About the Coalition For Disaster Resilient Infrastructure (CDRI)**

Launched by the Hon. Prime Minister of India at the UN Climate Action Summit in New York in 2019, the Coalition for Disaster Resilient Infrastructure (CDRI) is a partnership of national governments, UN agencies and programmes, multilateral development banks and financing mechanisms, the private sector, and academia that promotes the resilience of new and existing infrastructure systems to climate and disaster risks in support of sustainable development.

### **About the International Coalition For Sustainable Infrastructure (ICSI)**

ICSI is the global movement for engineering action on infrastructure sustainability, resilience, and climate change. ICSI brings together a global coalition of change agents from across the engineering, investment, city, and philanthropic communities committed to bold action to solve the systemic problems that exist at the intersection of climate change, ecosystem degradation, ageing infrastructure, and underinvestment. Built upon a commitment to tangible and collaborative action, ICSI continues to broaden participation across stakeholder communities to accelerate the innovation, adoption and scaling of people-centred, sustainable, and resilient infrastructure solutions that support sustainable development for all.
